Application/Control Number: 09/011,160

Art Unit: 1723

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. However, a new grounds of rejection follows.

DETAILED ACTION

Claim Objections

Claim 26 is objected to because of the following informalities: in line 4, "in" should be
 is—. Appropriate correction is required.

Claim Rejections - 35 USC § 102

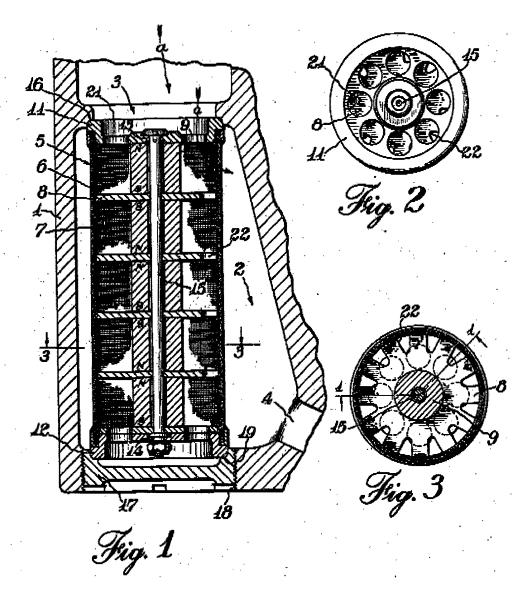

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 12-13, 15, 20, 22-24, 27-31 and 33-41 rejected under 35 U.S.C. 102(b) as being anticipated by Frei (U.S. 2,149, 764).

Application/Control Number: 09/011,160

Art Unit: 1723

As shown above, Frei discloses the all limitations of the aforementioned claims including the metal plates and magnets having faces of opposite polarity; the plates include aligned recesses for fluid flow. The arrangement allows for capturing of magnetic particles flowing in the fluid

2

2,14

through the filter unit 5, the fluid is forced to flow by the multitude of edges and corners provided by the magnetized baffle plates, and the magnetic material in the fluid adheres to such edges and also to the wires of the screens 8 and 1 which are also magnetized by their engagement with the peripheries of the baffle plates.

Art Unit: 1723

[as in claims 12, 22-23, 27, 30, 31 and 40]. Because of the arrangement, the plates are alternately charged such that regions are formed that would repel some particles, depending upon their charge [as in claims 13 and 28]. Distribution plates (11, 12) are also taught having apertures aligned with the plate recesses [as in claim 15]. As shown in figure 5, additional recesses ("slots") are taught. Also in figure 3, the notches 22 can be considered as a series of alternating recesses and slots [as in claim 20]. As for claim 24, plate 11 is thicker than plate 8 [as in claim 24]. Filter screen 5 is positioned downstream of the plates and magnets [as in claim 29]. As for claims 33-34, notches 22 formed pole pieces therebetween that extend radially past the magnet surfaces. As for claim 35, every other notch 22 can be considered a "radial slot" formed in a pole piece. The centrally located plates are of a common configuration [as in claim 37-38]. As for claims 39 and 40, the device can be unassembled because of bolt 15.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1723

- 5. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Frei in view of Lofthouse et al. (U.S. 4,208,277). Claim 18 has the limitation of the distribution plate being made of non-ferromagnetic material. Lofthouse teaches distribution plate 70 made of polyurethane [as in claim 18]. It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the distribution plate 11 of Frei to be made of polyurethane, as in Lofthouse, since Lofthouse teaches the benefit of a plate that can also function as a gasket (a seal). Notice that the plate 11 of Frei also acts as a seal against the flanges of a housing.
- 6. Claims 14, 16-17, 25-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frei in view of Morrick (U.S. 5,389,252). Frei teaches a housing and inlet and outlet connections but does not teach a flow passage through an tube within the aperture of a magnet of the aforementioned claims. However, Morrick teaches such a flow configuration having a tube 20 and aperatured magnet 24. It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention for the invention of Frei to include the flow configuration of Morrick since Morrick teaches the benefit of compatibility with commercially available oil filters. Such a configuration replacing the function of the screen 5 of Frei would allow for longer filtration times between cleaning of the magnets since the filter portion would be disposable. The tube of Morrick also includes threads for maintaining the abutment of components [as in claim 17].

Response to Arguments

7. Applicant's arguments with respect to the claims have been considered but are moot in view of the new grounds of rejection.

Allowable Subject Matter

- 8. Claims 19 and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 9. Claim 32 is allowed.
- 10. The following is a statement of reasons for the indication of allowable subject matter: The closest cited art—Frei—fails to anticipate or render obvious, alone or in any proper combination, the recesses including slots (claims 19 and 32) and the outer edges of the pole pieces curved towards one another.

Art Unit: 1723

11. Contact Information:

- Examiner Mr. Terry K. Cecil can be reached at (571) 272-1138 at the Carlisle campus in Alexandria, Virginia for any inquiries concerning this communication or earlier communications from the examiner. Note that the examiner is on the increased flextime schedule but can normally be found in the office during the hours of 8:30a to 4:30p, on at least four days during the week M-F.
- Wanda Walker, the examiner's supervisor, can be reached at (571) 272-1151 if attempts to reach the examiner are unsuccessful.
- The Fax number for this art unit for official faxes is 703-872-9306.
- Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
